

Gas mask measurement procedure

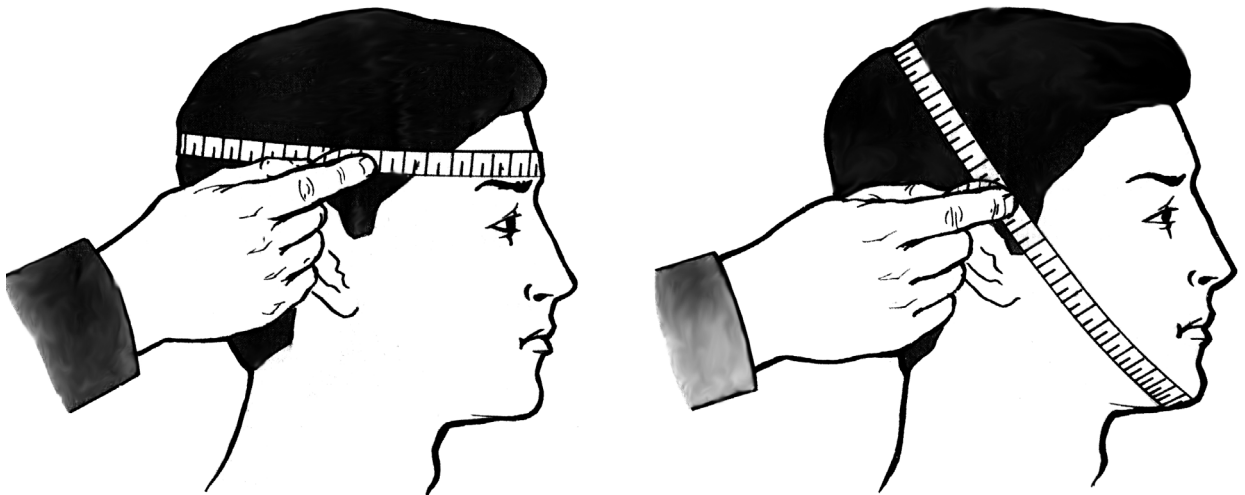

There are two ways to measure your head.

In the first method, the size is determined according to two measurements of the head:

- the first - along a closed line passing through the crown, chin and cheeks,
- the second - along the line connecting the holes of the ears and passing through the brow ridges.

The results of both measurements are added together, and the size of the gas mask helmet is determined from the table below.

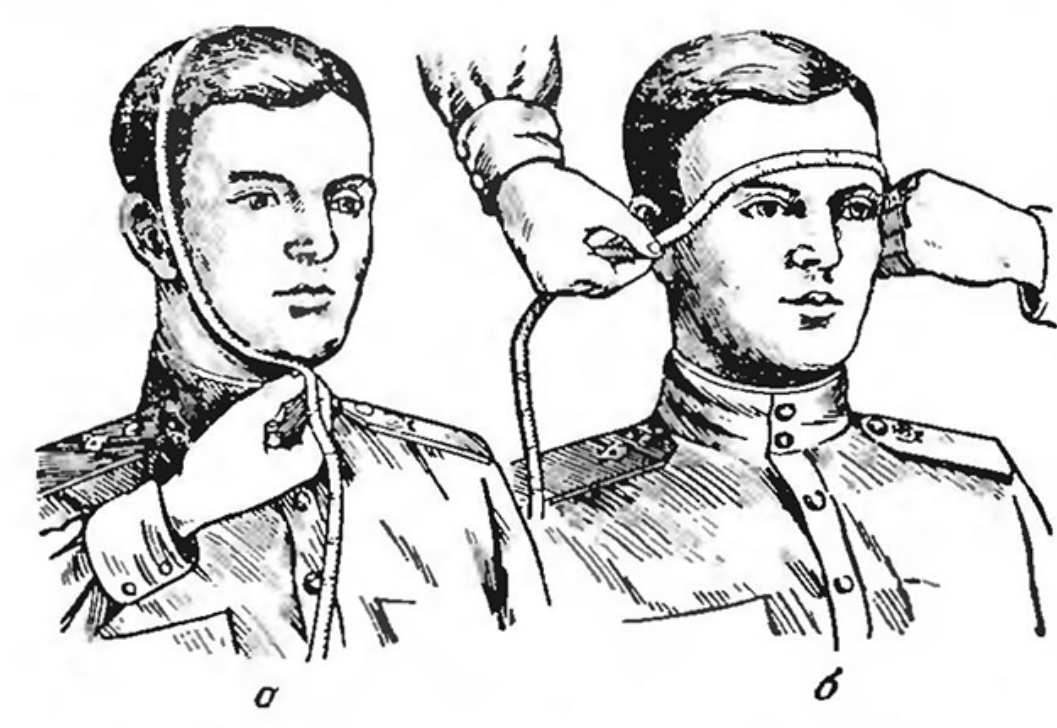

The first way

amount of measurement in cm

- Before 92 – 0 helmet-mask size
- 92-95.5 – 1 helmet-mask size
- 95.5-99.0 – 2 helmet-mask size
- 99.0-102.5 – 3 helmet-mask size
- More 102.5 - 4 helmet-mask size

The second way

amount of measurement in cm

- Before 63.5 – 0 helmet-mask size
- 63.5-65.5 – 1 helmet-mask size
- 66.0-68.0 – 2 helmet-mask size
- 68.5-70.5 – 3 helmet-mask size
- More 70.5 - 4 helmet-mask size
