

## Questions topic 1.3 part 4

To conduct chemical reconnaissance, use the following device

To conduct radiation reconnaissance, use the following device:

To determine the presence of a toxic substance in the air, the following is used:

To determine mustard gas, an indicator with markings is used

To determine sarin, soman and Vi gases in the air, an indicator with markings is used

To determine sarin or soman in the air, it is necessary to pump at least....times

To determine mustard gas in the air, it is necessary to pump at least....times

To check the readiness of the DP-5 device for operation, set the probe screen to the position

The DP-5 device is designed to determine the dose rate

The DP-5 device is intended for....

The indicator with three green rings is designed to determine...

The VPHR device is intended for.....

When working with the DP-5 device to detect beta radiation, it is necessary to install the probe screen in position.....

What type of ionizing radiation cannot be determined using the DP-5 device?

When setting the scale to “200”, the indicators are read from.....
